APPLICATION FOR PLANT VARIETY PROTECTION CERTIFICATE

VARIETY - LAKE GENEVA

Exhibit 13A

Origin and Breeding History.

Lake Geneva originated from a hand pollinated cross between Bush Blue Lake 274 and Geneva Breeding Line 108-20-1. Cross was made in 1964. Selections were made from the F2 to F6 by which time the desired blue-lake plant was obtained with upright plant habit; pods high in plant; compact; straight deep green pods; earliness; concentrated set; and resistant to interocular cavitation. There was a low frequency of creaseback and floppy plants.

Exhibit 13B

Seed color and flower color is white. Seed size is slightly smaller than Blue Lake 274 and pod maturity is three to four days earlier than Blue Lake 274. Pods are not bumpy as are Blue Lake types but smooth as in Cascade. Color of pods and foliage is similar to Blue Lake 274.

Exhibit 13C

Exhibit 13C is attached.

Exhibit 13D

SEE REVISED EXHIBIT D!

Data Indicative of Novelty.

Novelty is based on the unique following characteristics: Lake Geneva most closely resembles Blue Lake 274, except for four days earlier maturity; more upright plant structure, and concentrated pod set. Lake Geneva also resembles Lake Superior, except that plant structure is slightly more compact and pod color is darker.

Exhibit 13E

Statement of Applicant's Ownership.

Keystone Seed Co. believes it is the sole, original, and first breeder of Lake Geneva variety of bush bean for which it solicits a certificate of protection.
